Subject: San Jacinto Update

Gary – The San Jacinto Site was accessible yesterday and Holly met with the security camera folks and completed a visual inspection of the armored cap. They replaced the batteries on the camera system that was down (the one on the northern part of the central berm). There is a part of the system that is not working properly, most likely due to the storm, so the batteries would not recharge. That is being repaired in the next two days.

The water levels were back to a “normal” high tide that we see at the Site. All of the Eastern Cell was under water, but the majority of the Western Cell was dry:

- All visible portions of the cap are intact.
- Some of the temporary buoys are misplaced; however, the contractor for the buoys is mobilizing to the Site tomorrow to start installing the permanent system. That work may go through the end of the week.
- The new groundwater well exterior structures held up, and we are coordinating with the drilling contractor to get the final well installed now that we have access into the area.

Please don't hesitate to contact me if you want to discuss anything.

Thanks,
David
